

Press Release- August 28, 2008

Land O Lakes, Florida: For immediate release: Kool Tek is proud to announce the arrival of their new Countertop Ice Machine. The new ice maker can be used as a plumbed in or pour over system and does not require a drain. The unit produces a tray of ice every 7-8 minutes and approximately 33 lbs of ice per day with an outer body color of metallic charcoal gray. Cliff Rosen of Kool Tek said, "After 18 months of development, extensive testing and long anticipation, the Countertop Ice Machine is ready for our customers. This unit is a great addition to our operator's equipment offerings. It will help drive iced tea and coffee sales and serve as a terrific stand alone equipment lease. This model is about the same size as a countertop cooler and will fit well into most break room applications." For information on this and the entire Kool Tek line call 877-Kool-Tek or email cliff@kooltekcoolers.com. www.KoolTekCoolers.com
